

Ashwin Rishi . Jarvis Consulting

Full stack developer possessing demonstrated acumen in designing, developing, and maintaining web, desktop, and mobile applications. Passionate to learn new skills and seeking to leverage broad-development experience in a challenging role. One of the most amusing factors about coding is that we are leaving a legacy to be followed in every bit of file, and it inspires and excites me so much that each code we write is making someone's life easier.

Skills

Proficient: Java, SpringBoot/Jax-rs, NodeJs, React Js, BootStrap, RDBMS/SQL, Junits/Mockito, Agile/Scrum, Git

Competent: Angular, HTML/css, GraphQL, Jenkins, Crucible, Junits

Familiar: MongoDB, Neo4j, Python, R, Android Development

Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_eng_AshwinRishi

Linux Cluster Monitor. [GitHub]: Implemented a Monitoring Agent Program to help the LCA (The Jarvis Linux Cluster Administration). The LCA team has a specific set of bash scripts/files being run on the server. Our program helps to reveal the hardware information and resource usage to these servers. Additionally, with the help of the crontab command, the bash runs for every minute and inserts the data in PostgreSQL.

Core Java. [GitHub]:

- **Grep:** Have developed a Grep application that searches a file for a specified string and writes the matching line to another file. In where the String to search, input & output file location are passed through console. Moreover, Junits has been used to test the application.
- **JDBC:** Created a CRUD (create, read, update, and delete) application that communicates with PostgreSQL using the JDBC API. Transferring objects across classes and modules has also been done using the DAO and DTO design patterns.
- **Twitter Application:** To produce, read, and delete Tweets, this application is developed which uses the Twitter API v1.1. Development of Application involves using Java SpringBoot, and the type of actions to be performed is specified as user input in the command line. This application also runs in a Docker container. Applications are managed through maven.

Highlighted Projects

Sentimental Prediction of Users Perspective through Live Streaming: Text and Video analysis. [GitHub]: Developed an algorithm which calculates the sentimental score and assigns an integer value for the word or sentence given by the user. That integer is used to calculate the score for the word given; based upon the sentimental score calculated, and we categorize the result as positive or negative. We use the Jeffrey Breen approach, which helps find the semantic orientation of the words in the streaming websites like Twitter and YouTube using the API.

News Display & To-do List: [GitHub]: Have used JavaScript to build a To-do List that stores completed and pending task lists. Implemented the background using particle-js and Bootstrap to align the view for Mobile and web layout. Stores the data in local storage and retrieves the data each time an update is made on to the list & news data with animation with logout in HTML file.

Professional Experiences

Software Engineer., Jarvis (2021 - present): Have been working on multiple products and sprint backlogs. Developed and tested, and deployed Linux, Java, and Database projects. Have used docker to implement projects and collaborated on a scrum team within Agile Environment as a developer.

Capstone Project: Mobile Application & Development, Cambrian College. (2020 - 2021): Developed an appointment tracker that can chat and mail with the individual doctors. We can view and schedule appointments and edit, delete, insert, and update To-do List and notes. Built a secured login authentication with the blockchain along with JWT to improve the security by over 50%, implemented a Covid-tracker with news updates along with the calendar of events for each specific event. Demo: <https://ashwinrishi.github.io/HMS/>. Have created a Student Monitoring application using

Angular + SpringBoot(Java), which handles CRUD operations with MongoDB in Cloud. I have used Builder pattern and concurrency methods using threads, volatile, and Synchronization techniques in Java to handle multiple requests

Software Engineering Immersive(Trainee)., GUVI Geek Networks, IITM Research Park, India (2019 - 2020): Have graduated along with the other Trainees from various firms during this Bootcamp Training. Had great exposure to one of the world renowned developers teaching us the architecture scaling and Internal event loops in JavaScript and also code coverages of Junits. Been in Zen Class to Code continuously to achieve coding tasks and completions that's due on every week. Almost 13 to 15 hrs of coding everyday. Have developed full stack applications on HTML , CSS , Bootstrap , JavaScript, ReactJs , Node.js , Git and deployed multiple applications into AWS cloud.Lectured on topics of Event Loop and call-backs and hoisting in JavaScript to the ZenClass students. Developed, coded, modified and debugged application programs of varying degree of complexity with full independence.

Software Developer., Cerner Corporation. (2018 - 2019): Refined and improved the existing code for the Scheduling of user appointments in the revenue cycle team Iteration with continuous Integration of GIT and with AGILE working development ensuring that the coding standards being followed. Developed an Appointment Scheduler Application as part of Industrial training using the JAX-RS(REST -API) with React JS and provided to the user with concurrent handles of 400 users. Have drafted Unit testing related to the APIs from JAX-RS with more than 90% test coverage and authored in peer code reviews for the features and bugs tagged in JIRA. Wrote highly maintainable, solid code for the software system, forming a core framework and earning consistent praise from subsequent developers since initial version.

Education

Cambrian College (2020-2021), Post Graduate Diploma, Mobile Application - Developed an application for college Online Application. - President's List (2020, 2021) - GPA: 4.0/4.0

VIT university (2017-2019), Master of Engineering., Computer Science and Engineering. - Have won prizes in symposiums and college cultural fests. - 8.53/10 GPA

Miscellaneous

- LinkedIn Certificate(ReactJs)
- Second prize in robotics competition
- Reading Poems and novels
- playing Archery and Cricket
